**September 23, 2008**

**GOLDEN, COLORADO** – Echoserve, Inc., announces that the company has moved their corporate headquarters to a new 27,000 square-foot facility located in the foothills of Golden, Colorado. The facility is designed to optimize workflow for the company’s manufacturing and depot repair operations and houses administrative areas, research and development facilities, a field service training center and x-ray equipment labs, including a Class 10,000 clean room for the production and repair of digital x-ray components.

“The move to our new facility is another major milestone in the continued expansion of our company,” said Christopher Cone, Chief Executive Officer of Echoserve. “Having the opportunity to design the facility from the ground up allowed us to realize the ideal layout for our business. The new facility will allow us to significantly increase the output of our manufacturing, refurbishment and repair operations and to further improve on our ability to meet customer expectations for quality and lead-time,” added Mr. Cone.
