GOLDEN, COLORADO - Echoserve, LLC, a privately held company based in Golden, Colorado, announces its entry into the mammography market. With this business expansion, the company has hired Paul Proffit to lead the mammography business unit and has doubled the size of its depot repair facility.

“Echoserve is fortunate to be headquartered in Colorado, where a significant amount of x-ray engineering talent is available,” said Christopher Cone, president of Echoserve. “Echoserve has distinguished itself as a premier provider of depot repair/exchange services for the diagnostic ultrasound market and we were anxious to leverage our core technical expertise into other imaging modalities. Mammography is a natural for us given the x-ray engineering resources that we have and because of Colorado’s historical importance to the industry.”

“Having worked for major mammography manufacturers, I was highly impressed with Echoserve’s approach to depot part repair/exchange and field service. Their disciplined technical approach to the business allows it to compete very effectively with manufacturer service groups and gives the company access to a huge cross-section of customers. I’m extremely pleased to be joining Echoserve’s management team and look forward to leading the company into the mammography market,” added Paul Proffit.

Echoserve has invested in an initial parts inventory and test beds for several mammography platforms. The company now provides depot part repair/exchange, field service and refurbished equipment for major GE, Hologic (Lorad), and Fischer Imaging machines.

ABOUT ECHOSERVE
