**June 3, 2009**

**GOLDEN, COLORADO** – Echoserve and Linear Medical are pleased to announce a preferred distribution and service agreement for the Linear Medical MammoTest Flx prone stereotactic breast biopsy table. Echoserve will be the preferred distributor and service provider for the system within the United States and the exclusive manufacturer of the Elite Cesium digital camera used in the system's imaging chain.

The MammoTest Flx biopsy table offers clinicians the greatest resolution in the industry and improved lesion access. The table provides flexible movement within a room via modified wheel bases, control handles located underneath the table and out of the patient's way, easy access connection cables, and new versions of software. The revolutionary design reduces procedure time and improves patient comfort by eliminating steps from targeting to biopsy. The Elite Cesium camera provides up to 70% higher contrast resolution than standard cameras to aid in early cancer detection and enable successful biopsy in even the most difficult cases.

"Echoserve is focused on providing quality medical equipment and services to the women's health industry. The proven track record of the MammoTest technology is an ideal addition to our current portfolio of product and service offerings," said Christopher Cone, Chief Executive Officer of Echoserve.

"We are pleased to have Echoserve as our preferred distributor and service provider for the MammoTest Flx system," said Steve Durnil, President of Linear Medical. "Echoserve's experienced sales and service teams are well established within the mammography industry in the United States, and will provide the technical expertise and quality of service the clinicians expect."
