

Job Posting: Ultrasound Field Service Engineers

Echoserve is the world's fastest growing field service company for diagnostic ultrasound and mammography systems, as well as the world's premier depot repair center for ultrasound and mammography equipment.

We are currently seeking ultrasound field service engineers for the following areas:

- New York/New Jersey

This is a field-based position reporting to the VP of Service. This person has front-line responsibility for installing, maintaining, servicing and repairing equipment at clinical sites. Although the primary function of this position is to provide field service on equipment, there is a degree of sales and business development required which will result in commission compensation.

Qualified candidates possess extensive knowledge in ultrasound service and general familiarity with service associated with GE, Siemens, Philips, Toshiba and/or Medison equipment. Additional qualifications include:

- At least 2 years of direct field service experience in ultrasound
- Experience with implementation and support of PACS systems
- Willingness to undertake day travel up to 75%
- General knowledge of ISO 9000 and FDA Quality System Regulation (QSR) guidelines
- Fluent reading, writing and speaking English
- Ability to lift 40lbs
- Valid driver's license and good driving record
- Clear and professional written and verbal skills
- Ability to deal effectively with customers

Compensation is a combination of salary and commissions, plus car allowance, health benefits, 401K, and expenses.
